DEWETRON

ADD MATH CALCULATIONS TO THE MEASUREMENT SETUP

- ① To create
- > Formulas
 - > Order analysis modules
 - > Rosette calculations
- press the + button
Select the proper calculation
and press *Add*

- ② Reference channels must be selected
before creating
- > Statistics
 - > Filters
 - > FFT
 - > Swept sine analysis
 - > Psophometers

CREATING FFT MATH CHANNELS

- 1 Select one or several channels to be filtered by checking their check boxes and press the + button
- 2 Select *FFT* and choose the proper spectral analysis options
- 3 Press *Add* afterwards to create these channels
- 4 Two output channels per reference channel will be created
 - > Complex (*_Cpx*) including the complex spectrum
 - > Amplitude (*_Amp*) including the amplitude spectrum
- 5 Changes can still be applied by entering the settings of the desired channel via the *Gear* button

The image shows a software interface for creating FFT math channels. It is divided into two main parts: a dialog box for adding a new channel and a panel for configuring the existing channels.

Top Panel: Add Channel - FFT

- Basic Math:** Formula (FFT), Filters (FFT), Amplitude spectrum (Amplitude), Group name (FFT Channels).
- Advanced Math:** Power Group, Order Analysis, Swept Sine Analysis, Rosette, Psophometer.
- Data Sources:** Ethernet Receiver, Other, Diagnostics Channel.

Bottom Panel: Channel Setup

- Channel List:** Shows a tree view under 'LocalNode' with 'FFT Channels' expanded. It lists reference channels (e.g., 'AI 1/11 Sim FFT') and their corresponding output channels ('AI 1/11 Sim_FFT_Cpx' and 'AI 1/11 Sim_FFT_Amp').
- REFERENCE CHANNEL:** Shows details for 'AI 1/11 Sim FFT' (Hann, 50%, 48.8Hz, Sample rate 200000 Hz).
- FFT SETTINGS:** Shows configuration for the selected channel: Data size (4096 Samples), Line resolution (48.828125 Hz), Window (Hanning (-31dB)), Normalization (Amplitude true), Overlap (50%).
- FFT OUTPUT CHANNELS:** Includes checkboxes for 'Enable amplitude channel' and 'Enable phase channel'.

Blue arrows and numbers (1-5) indicate the workflow: 1. Selecting channels in the list and pressing the '+' button. 2. Selecting 'FFT' in the 'Basic Math' section. 3. Pressing the 'Add' button. 4. Selecting a gear icon for a channel to edit its settings. 5. Adjusting settings in the 'FFT SETTINGS' and 'FFT OUTPUT CHANNELS' panels.

FFT SETTINGS IN DETAIL

1 Select the number of samples to be transformed simultaneously or define the FFT line resolution

2 Enable zero padding to increase the line resolution virtually

3 Select a window type

4 Select an amplitude normalization option

5 Select an overlapping factor

6 Select the spectrum type for the *Amplitude* channel if enabled

7 *Averaging* over multiple spectra is possible

8 Select the spectrum type for the *Phase* channel if enabled

The screenshot displays three stacked windows for configuring FFT settings. Each window has a 'LocalNode' tree on the left and a main configuration area on the right. The top window is for 'AI 1/1 Sim FFT' with 'Hann, 50%, 48.8Hz' settings. The middle window is for 'AI 1/1 Sim FFT' with 'Amplitude' spectrum type. The bottom window is for 'AI 1/1 Sim FFT' with 'Phase' spectrum type. Blue circles 1-8 are placed on the interface to highlight specific settings: 1 (Data size), 2 (Improve line resolution), 3 (Window Type), 4 (Normalization), 5 (Overlap), 6 (Amplitude Type), 7 (Averaging), and 8 (Phase Type).

VISUALIZE FFT CHANNELS

DEWETRON

Amplitude and phase channels can be visualized with a Spectrum Analyzer or a Spectrogram

- ① *Spectrum Analyzer displays the actual spectrum*
- ② *Spectrogram displays the time dependent spectral trend*

Complex FFT channels can't be visualized in OXYGEN but can only be exported after recoding for post processing

Amplitude and phase channels can surely be exported as well for post processing

The screenshot displays the DEWETRON software interface. At the top, a timeline shows recording time from 3:25 to 4:20. The main area is divided into two sections: the top section shows a Spectrum Analyzer with a bar chart of frequency components, and the bottom section shows a Spectrogram with a time-dependent spectral trend. A right-hand sidebar contains an 'Instruments' panel with various tool icons. Two blue callouts with circled numbers '1' and '2' point to the Spectrum Analyzer and Spectrogram respectively. At the bottom of the interface, a status bar indicates 'Available disk space: 5.3 GB, estimated recording time: 1h 15m'. The 'SCREEN' section at the bottom right has 'Clear' and 'Clear all' buttons.

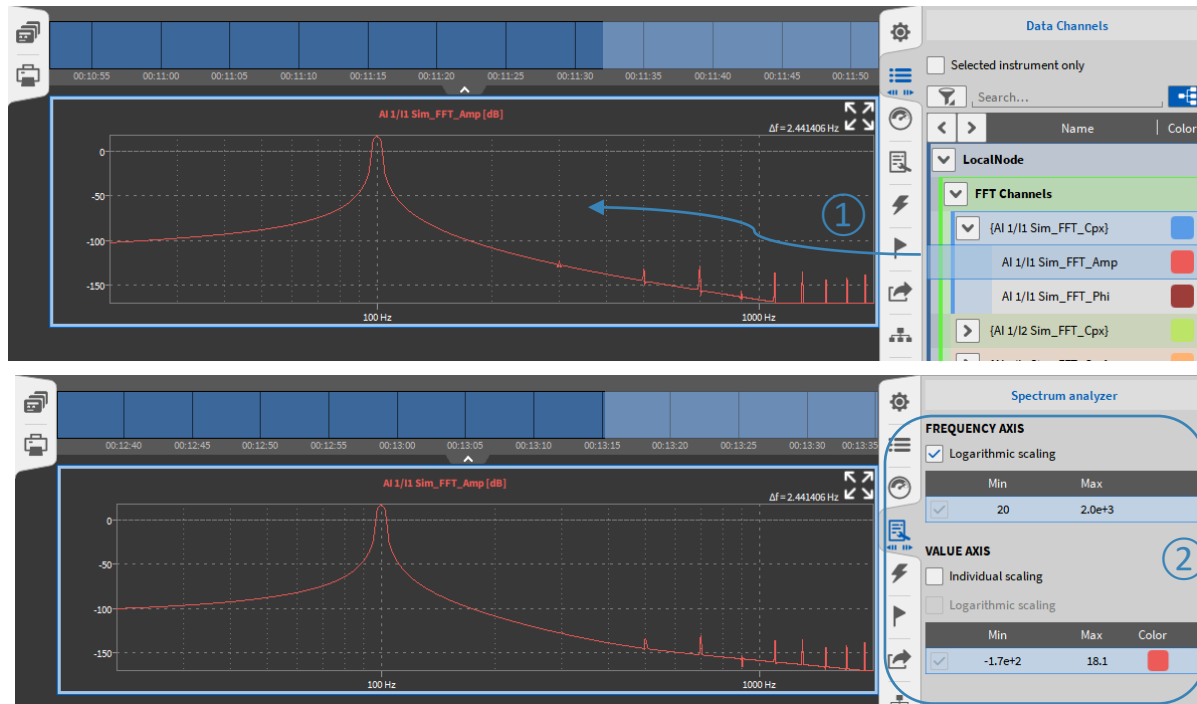

DEWETRON

SPECTRUM ANALYZER

© DEWETRON GmbH | July 23

① Assign an amplitude or phase channel from the Channel list for visualization

② Certain scaling options for X and Y Axis can be accessed in the Instrument Properties

DEWETRON

SPECTRUM ANALYZER CONT'D

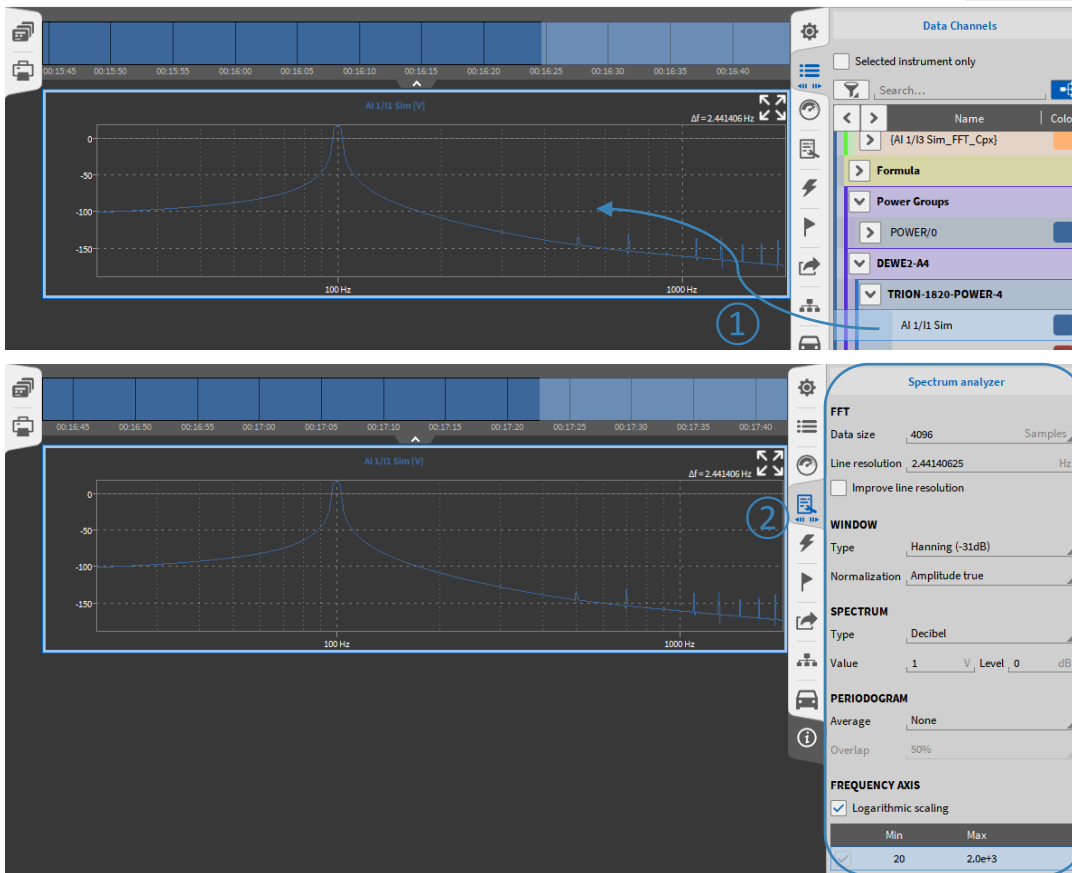

© DEWETRON GmbH | July 23

① Possibility to directly assign time domain channels to a Spectrum Analyzer for FFT visualization

② FFT settings are available in the Instrument Properties

Difference to math FFT:

- > Data only visualized but not stored to a separate channel
- > No export possible
- > No deterministic calculation
- > No timing information about spectrum update available

FFT REFERENCE CURVES - OVERVIEW

DEWETRON

© DEWETRON GmbH | July 23

Features:

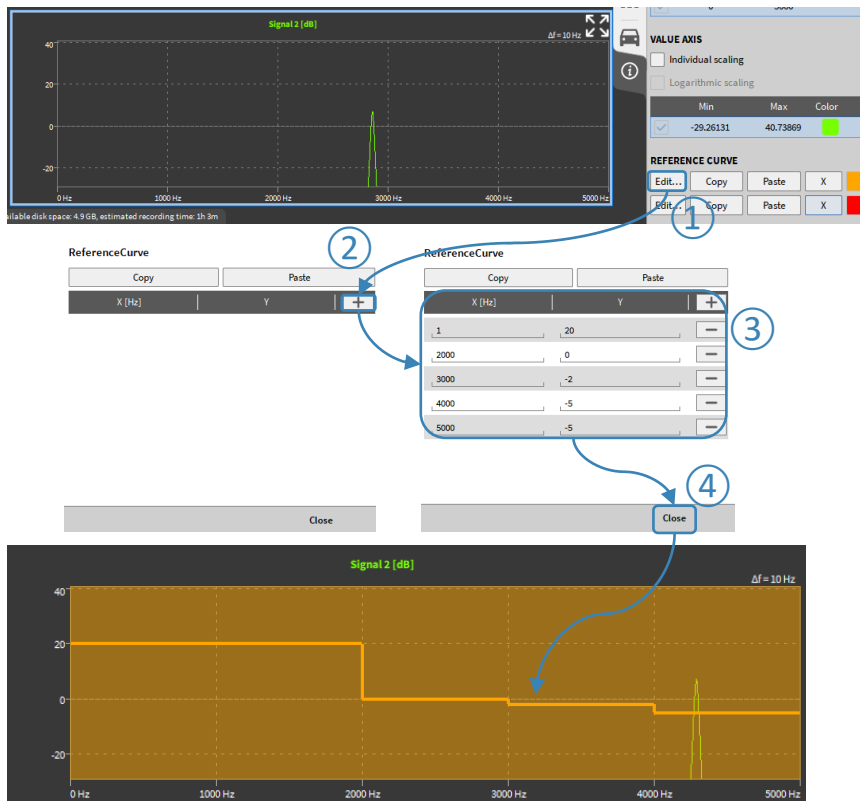

- Two Reference curves available in Spectrum Analyzer
- Background changes color if threshold is exceeded
- Background color is reset if threshold is decreased again
- Definition via value table (same manner as table scaling)
- Copy and paste table from / into Excel

FFT REFERENCE CURVES – HOW TO CREATE

- 1 Press the *Edit...* button and a popup menu will open
- 2 Press the *+* button to add one or several lines
- 3 Add the frequency and the corresponding threshold
- 4 Press *Close* and the reference curve will be drawn in the Spectrum Analyzer

FFT REFERENCE CURVES – COPY & PASTE DATA

DEWETRON

> Copy & paste from orange to red curve and vice versa

X (Hz)	Y	
1	20	—
2000	0	—
3000	-2	—
4000	-5	—
5000	-5	—

> Copy & Paste from / into Excel or others

X (Hz)	Y

5000	-5	—

DEWETRON

HARMONICS CURSOR

- ① Harmonics Cursors can be displayed by checking *Show Harmonics*
- ② The number of harmonics can be set from 1 to 10
- ③ Harmonics are marked with cursors
- ④ Harmonics amplitude is displayed at the instrument's bottom
- ⑤ The cursor position can be changed by entering a new frequency for the first harmonic
The position of the higher harmonics is automatically adjusted
- ⑥ It is also possible to move the first harmonic cursor with the left mouse button
The position of the higher harmonics is automatically adjusted

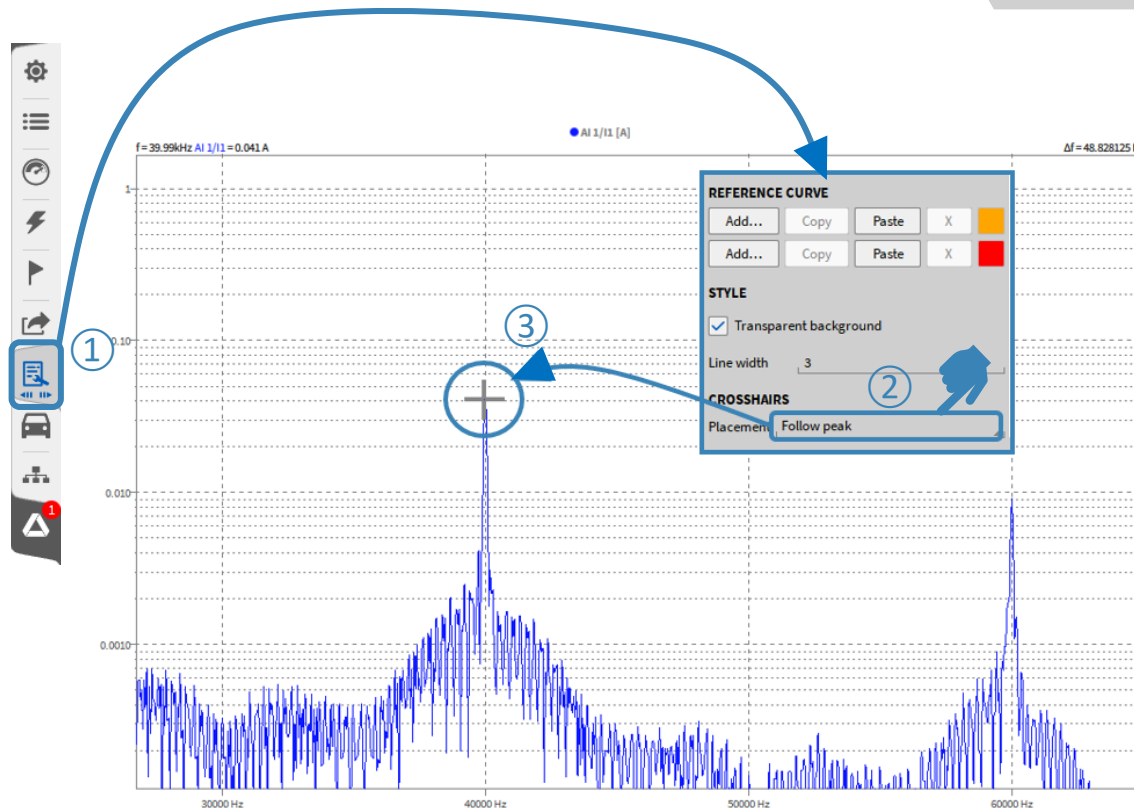

DEWETRON

PEAK HAIR CURSOR

- 1 Select the Spectrum Analyzer instrument and pen the instrument properties
- 2 Go to the crosshairs section and select „Follow peak“ in the dropdown box for the placement
- 3 A crosshair will be displayed automatically in the Spectrum Analyzer instrument. It follows automatically the highest peak in the visible range of the instrument.

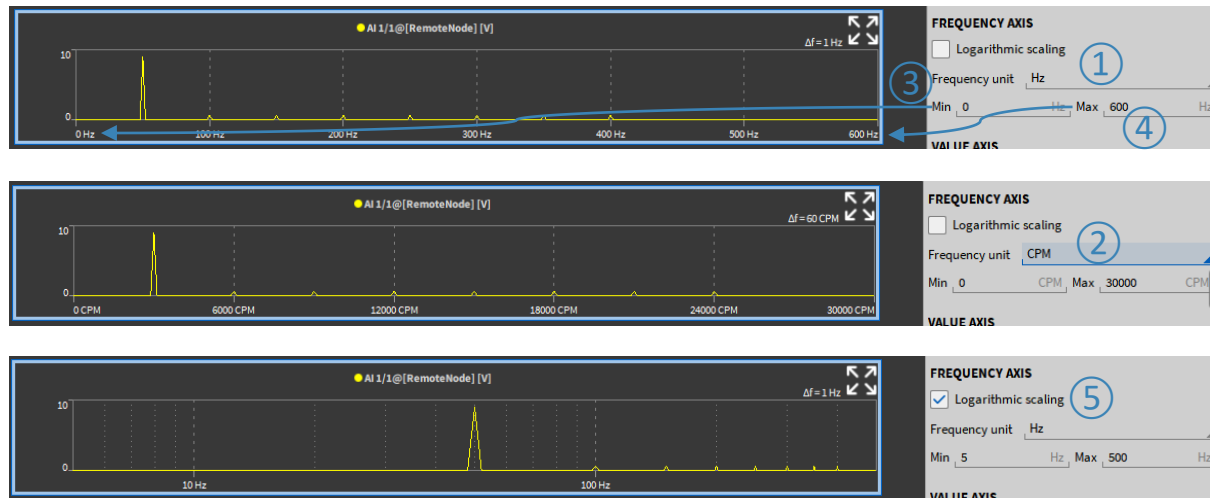

DEWETRON

FREQUENCY AXIS SETTINGS

- ① The unit of the X-Axis is Hertz [Hz] per default
- ② The unit can be changed to Cycles Per Minute [CPM] which is defined as [Hz] * 60
- ③ The axis' minimum can be freely defined
- ④ The axis' maximum can be freely defined
- ⑤ The scaling can optionally be set from linear to logarithmic scaling

© DEWETRON GmbH | July 23

DEWETRON

SPECTROGRAM

- ① Amplitude and phase channels can be assigned to a Spectrogram from the Channel List
- ② Settings for visualization can be edited in the instrument properties
 - Per default, the Spectrogram plots
 - > the elapsed time on the X-Axis
 - > The frequency range on the Y-Axis
 - > Color-codes the amplitude of the spectrum
- ③
 - > Color Resolution can be changed by moving the mouse along the color scale with a left mouse click
 - > Color Range can be changed by pressing CTRL+ Scrolling

Available disk space: 5.3 GB, estimated recording time: 1h 15m

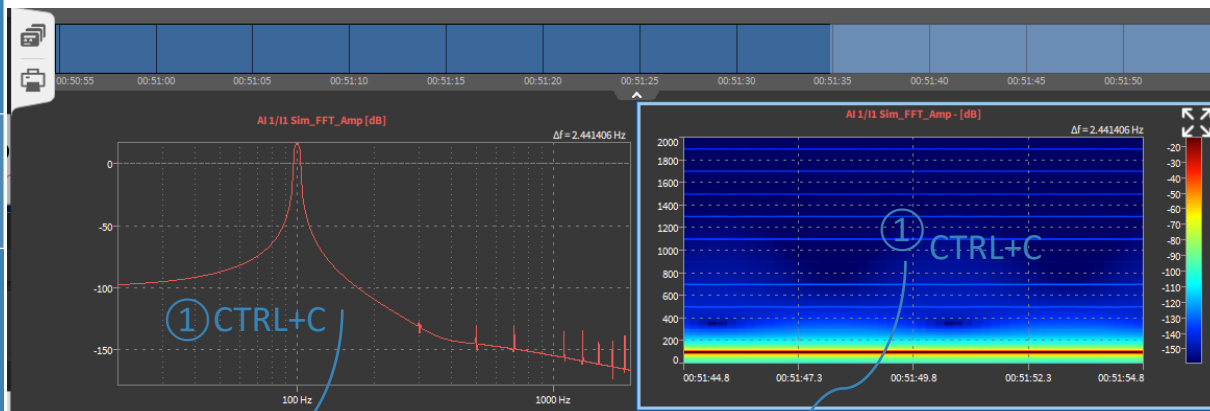

DEWETRON

© DEWETRON GmbH | July 23

COPY + PASTE FFT DATA TO EXCEL

① Select the instrument with a left click (blue frame around instrument occurs) and press **CTRL+C** to copy the currently displayed data to clipboard

② Open Excel or a different software to paste the FFT data from clipboard with **CTRL+V**

CREATING A CPB ANALYSIS

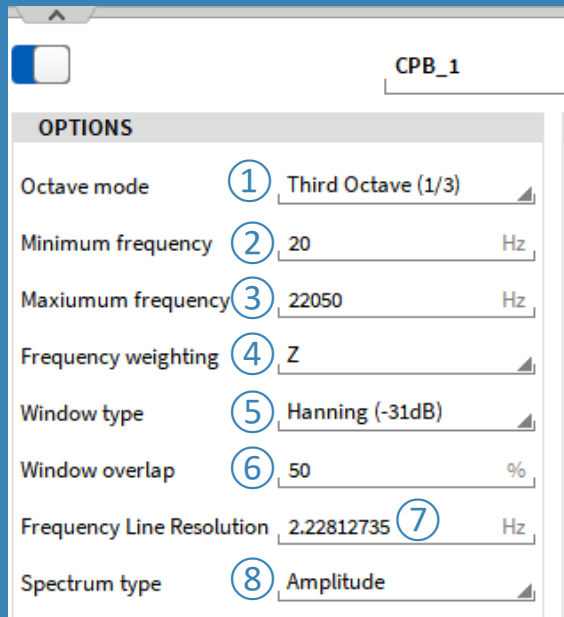

- 1 Select one or several channels by checking their check boxes and press the + button
- 2 Select *CPB Analysis*, choose the proper calculation options and enable the required output channels
- 3 Press *Add* afterwards to create these channels
- 4 A separate output channel for each reference channel and calculation is created
- 5 Changes can still be applied by entering the settings of the desired channel via the *Gear* button

CPB ANALYSIS OPTIONS

DEWETRON

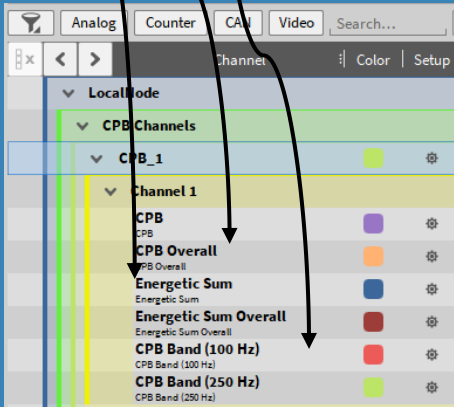

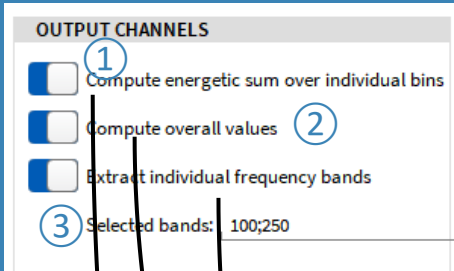

- ① Select Octave, Third, or Twelfth octave band resolution (EN 61260)
- ② Select the minimum frequency for the CPB analysis
- ③ Select the maximum frequency for the CPB analysis
- ④ Select between A-, B-, C-, D-, or Z (linear) weighting (DIN-EN 61672)
- ⑤ Select a window type for the spectral analysis
- ⑥ Select an overlapping factor 0 ... 90% for the spectral analysis
- ⑦ Adjust the frequency resolution if required
- ⑧ Select between an Amplitude spectrum and a decibel spectrum with freely definable reference value and reference level

CREATING A CPB ANALYSIS

DEWETRON

The actual CPB spectrum (changing in time) is calculated per default. The channel name is *CPB*

- ① The energetic sum for the spectrum is calculated.
The channel name is *Energetic Sum*

$$\text{For Amplitude Spectrum: } \textit{Energetic Sum} = \sqrt{\sum_{i=1}^n x_i^2}$$

$$\text{For Decibel Spectrum: } \textit{Energetic Sum} = 10 * \log \sqrt{\sum_{i=1}^n (10^{\frac{x_i}{10}})^2}$$

- ② One CPB spectrum and energetic sum averaged for the entire measurement time with reset at Recording start.
The channel name is *CPB Overall* and *Energetic Sum Overall*

- ③ If *Extract individual frequency bands* is enabled, frequency bands can be output as time domain channels. I.e. If 100 Hz is entered, the 100 Hz band will be extracted as time domain channel to analyze the time dependent trend.

CPB CHANNEL VISUALIZATION WITH ARRAY CHART

DEWETRON

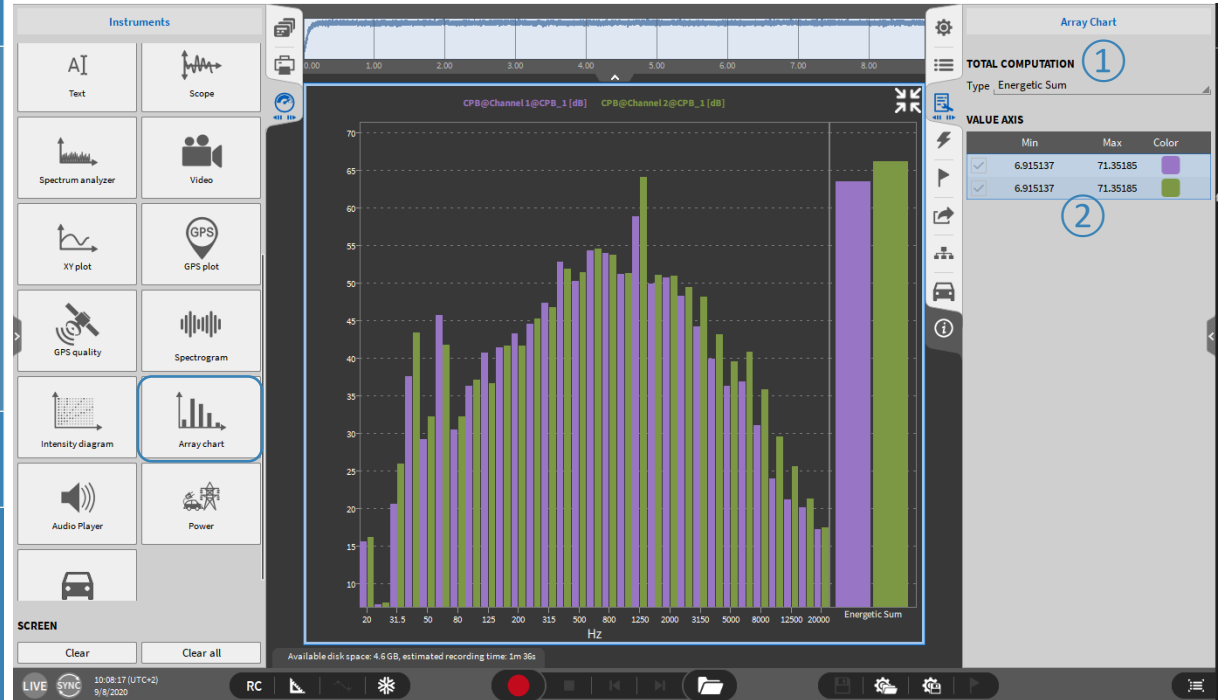

Array Chart Instrument can be used to visualize a CPB spectrum

① Total Computation: Optionally add an additional column on the right hand instrument side which displays the

- Minimum
- Maximum
- Energetical Sum

Of the CPB spectrum

② Values Axis: Change the scaling of the Y-Axis

DEWETRON

OFFLINE MATH – ADDING CALCULATIONS TO THE DATA FILE

- ① Basic and Advanced Math (except Power Groups) can be created offline
- ② Offline created channels are marked with a green *Stored* button
- ③ Any changes to a data file can be stored with the *Store* button

Add Channel

Basic Math

- Formula
- Statistics
- Filters
- FFT

Advanced Math

- Power Group
- Order Analysis
- Swept Sine Analysis
- Rosette
- Psophometer

Remarks:

- > After closing and reopening a data file again, the offline created channels cannot be edited any more
- > Thus, it's not possible to edit settings of an online calculated channel
- > It is not possible to edit the settings of an analog channel, digital or counter channel offline
- > Please keep in mind that the results of an offline calculated channel can differ from an online calculated channel, i.e. filters as they are oscillating at the beginning
